# 1 Figures

## 1.1 Figure 1: Network Graph of Silicon Valley Outsourcing Relationships

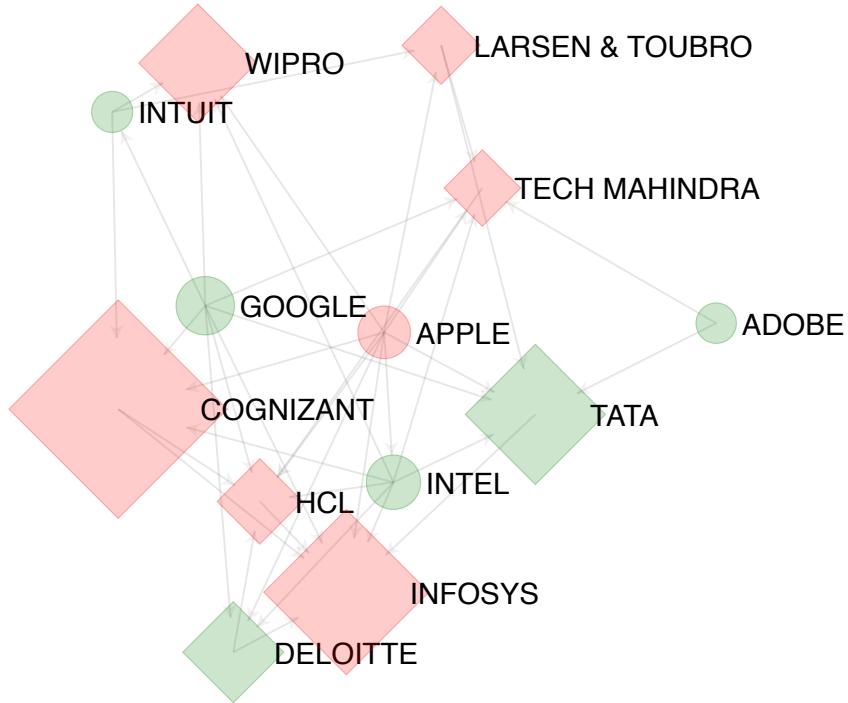

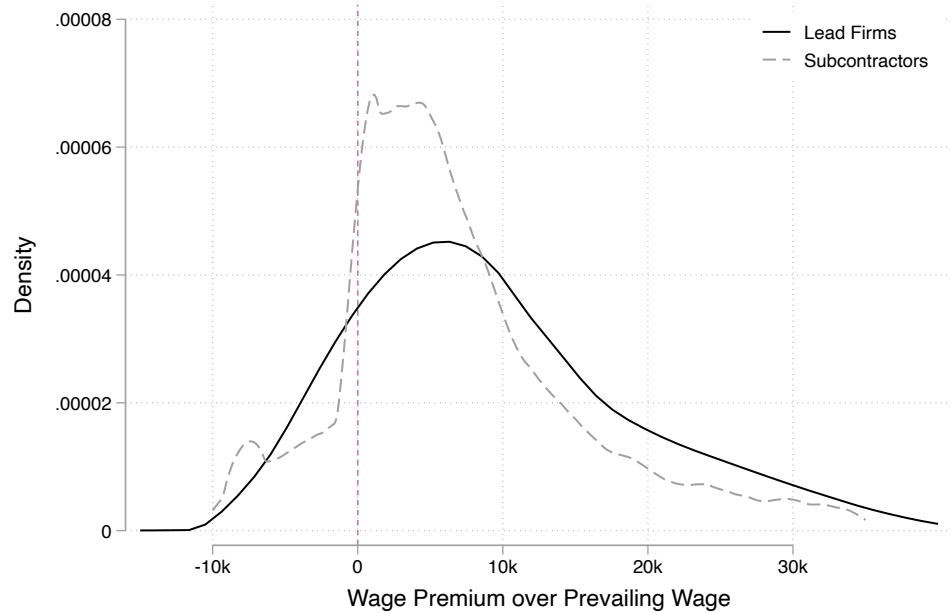

Figure 1: A Network Graph of Silicon Valley Outsourcing Relationships

NOTE. The arrows in this directed graph emanate from lead firms and are directed toward their subcontractor(s). Size is based upon the number of H-1B visas approved from 2009–2020. The largest sponsoring firm, Cognizant, received 170,144 H-1B visa approvals, and the smallest, Adobe, received 2,487.

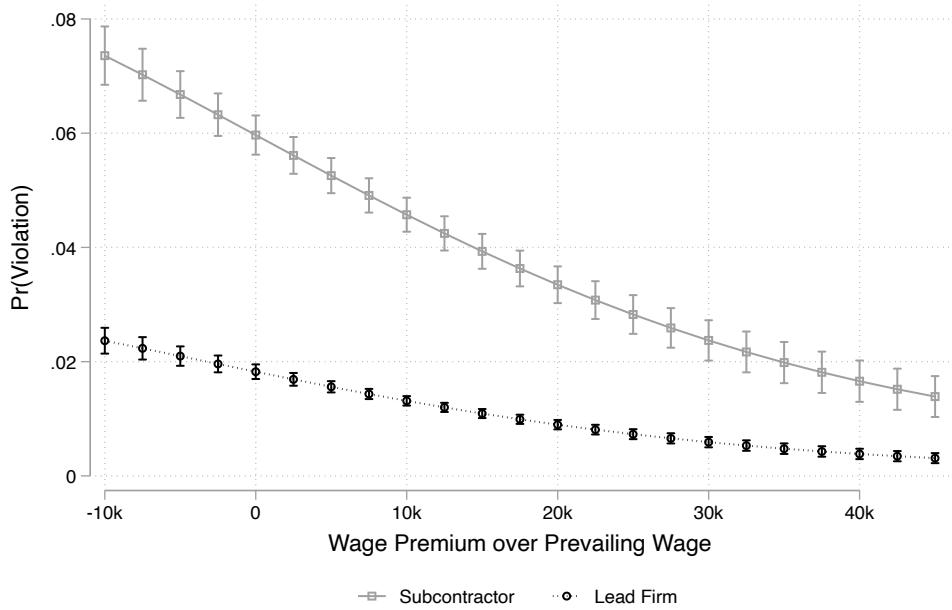

## 1.2 Figure 2: Wage Premium and Violations

**Panel A. Post-2005 Kernel Density Estimate of Wage Premium over Relevant Wage Floor by Subcontractor/Lead Firm Status**

NOTE. Epanechnikov kernel with bandwidth = \$5000. The vertical line at \$0 indicates the relevant prevailing wage for lead firms, or the higher of the relevant prevailing wage or the \$60,000 wage floor for subcontractors to avoid additional labor market tests for H-1B-dependent firms that was effective after Fiscal Year 2005.

**Panel B. Probability of Violation as a Function of Wage Premium over Relevant Wage Floor by Subcontractor/Lead Firm Status**

### 1.3 Figure 3: Average HHI and the Count of Violations

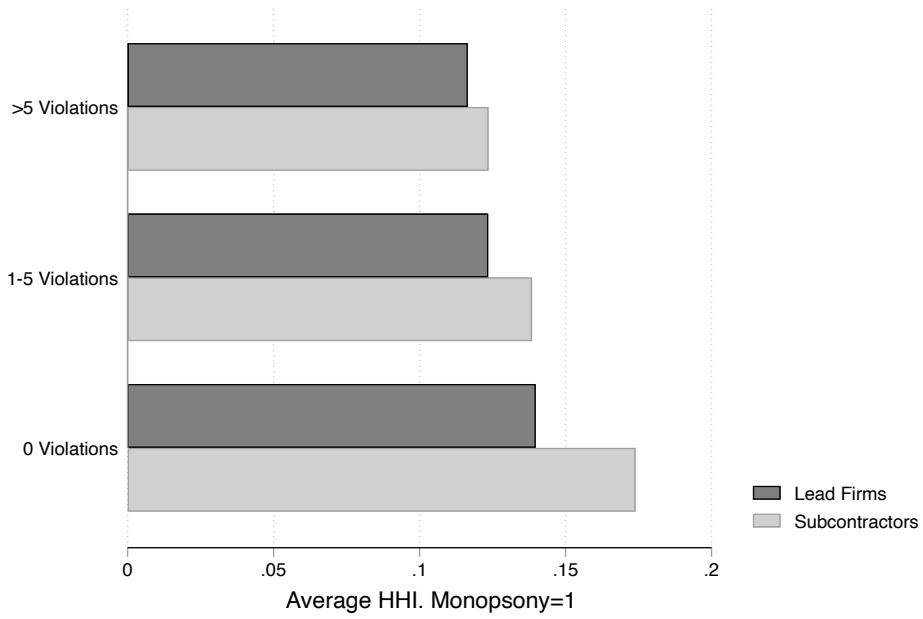

Figure 2: Average  $HHI$  and the Count of Violations (0, 1–5, > 5)

## 1.4 Figure 4: Violations Intensity by HHI, Subcontractor Status, and Skill

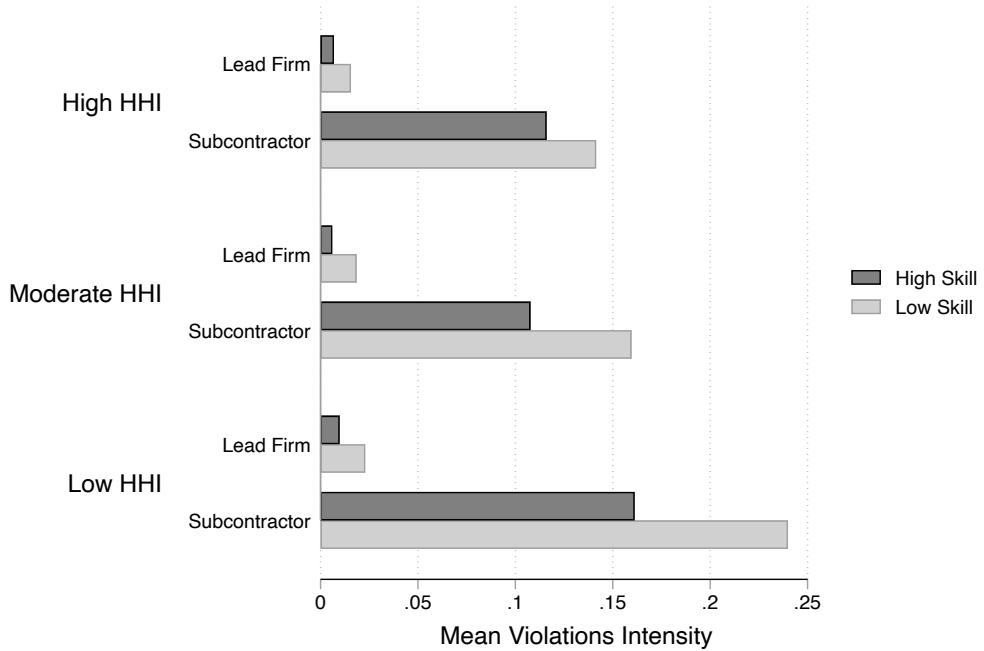

Figure 3: Average Violations Intensity by Labor Market Concentration, Subcontractor Status, and Skill Level

NOTE. We use the Department of Justice merger guidelines as categories for  $HHI$  (least concentrated = less than or equal to 1000, moderate concentration = between 1000 and 1800, highly concentrated = over 1800), and combine skill levels 1 and 2 into “low skill” and 3 and 4 into “high skill” categories.

1.5 Figure 5: Probabilities a Firm Has a Violation

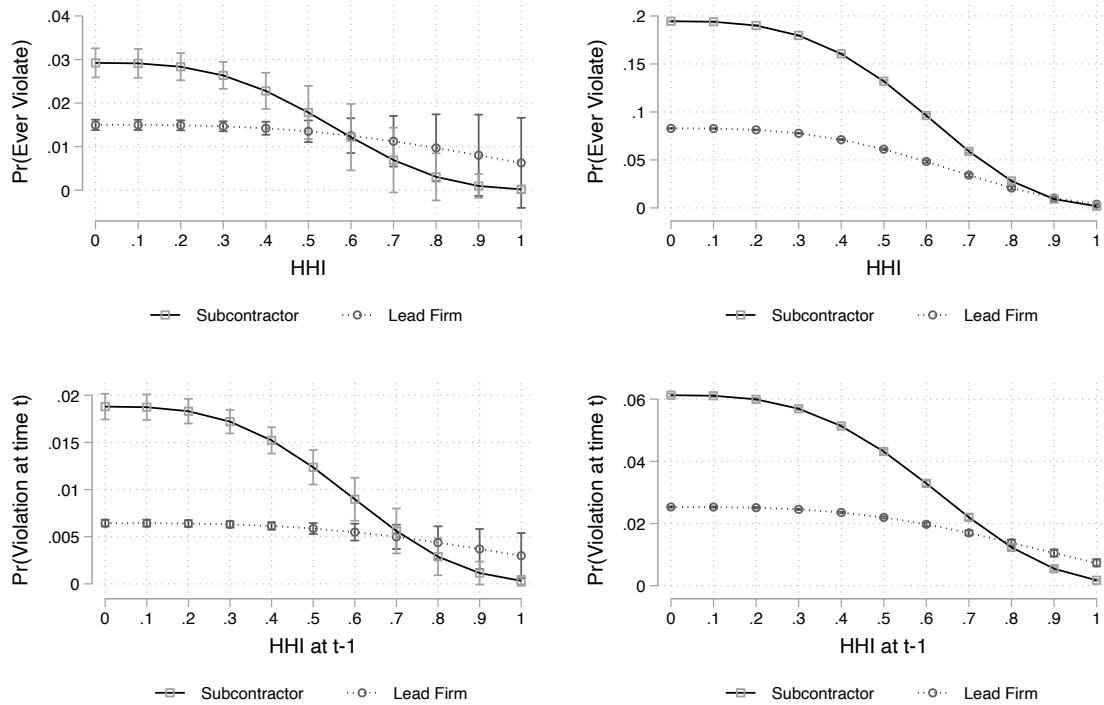

Figure 4: Probabilities a Firm Has a Violation

## 1.6 Figure 6: Wage-Setting Choices Facing the Monopsonist

*Note: Figure 6 is a theoretical model diagram that was manually created and is not reproducible via code. Please refer to the published paper for this figure.*

## 2 Main Tables

### 2.1 Table 1: Descriptive Statistics

Table 1: Descriptive Statistics  
**Panel A: Full Sample**

	Mean	SD	Min	Max	Median
Violations	0.044	2.118	0.000	485.000	0.000
Violations Intensity	0.023	0.371	0.000	12.788	0.000
% of Cells with any Violations	0.004	0.064	0.000	1.000	0.000

## 4 Replication Notes

### 4.1 Data and Sample

The analysis uses administrative data on H-1B visa petitions merged with Wage and Hour Division enforcement records. The main estimation sample consists of 1,237,750 observations at the firm-occupation-commuting zone-year level for firms with at least one violation during the sample period.

### 4.2 Key Variables

- $\text{logviol}$ :  $\log \left( 1 + 1000 \times \frac{\text{Violations}_{foc}t}{\text{H1Bs}_{foc}t} \right)$
- $\text{logbw}$ :  $\log \left( 1 + 1000 \times \frac{\text{Back Wages}_{foc}t}{\text{H1Bs}_{foc}t} \right)$
- $\text{logbwpw}$ :  $\log \left( 1 + 1000 \times \frac{\text{Back Wages}_{foc}t}{\text{Wages Promised}_{foc}t} \right)$
- $\text{HHI}$ : Herfindahl-Hirschman Index (three-year rolling average), where 1 = monopsony and 0 = perfect competition
- $\text{SUB}$ : Binary indicator for subcontractor firms (1) vs. lead firms (0)

### 4.3 Software Requirements

- Stata 16 or higher
- Required packages: `estout`, `reghdfe`, `ppmlhdfe`, `nwcommands`, `ivreg2`, `xtivreg2`
- L<sup>A</sup>T<sub>E</sub>X distribution for PDF compilation

### 4.4 Running the Replication

Execute the master do-file in Stata:

```
do code/00_master.do
```

This will generate all tables in `output/tables/` and figures in `output/figures/`, then compile this document.

---

*Replication package created: February 2026*
